Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera

l'arrondissement, l'indice total - tous les produits devra être considere comme celui qui fait autorité, et l'indice total - toutes les industries industries industries naturationneres sera posé égal.

The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité. (2)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

Nota: Les indices deves are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the input-Output tables are not yet available on the updated classification.

(1) Les indices des sorties nettes sont calculés pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

TABLE 6. Electric Power Selling Price Indexes, for Non-residential Customers

#### TABLEAU 6. Indices des prix de vente de l'énergie électrique, pour les acheteurs non-résidentiels

# EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

#### Industrial Product Price Indexes, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

#### Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

# EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRE DES PRIX INDUSTRIELS

#### Indice des prix des produits industriels, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien.* Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

#### Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabilistes, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 auotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

#### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input Output table which. in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

#### Formula

1000)

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant

The general formula used for the main aggregations describes the price movement of a specified group of commodities where wi are the values of the output of each commodity:

indicates summation over all elements i in

the defined aggregate.

sont reconstruits régulièrement, suivant l'évolution du marché, Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'obiet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

#### Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

#### Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorpores systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w' sont les valeurs de la production de chaque produit:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| P <sub>t/o</sub> | denotes the composite price index<br>movement between the base period o and<br>time t for the defined aggregate; | P <sub>t/o</sub> | dénote le mouvement de l'indice composite de prix<br>entre la période de référence o et la période t pour<br>l'agrégat défini; |
|------------------|--|------------------|--|
| wi               | is the transaction value of the element i in the base period;  | wi               | est la valeur de transaction de l'élément i au cours<br>de la période de référence;  |
| Pt/o             | is the price index for element i, meaning its price change from the base period to time t;                       | Pt/o             | est l'indice de prix de l'élément i, désignant sa<br>variation de prix entre la période de référence et la<br>période t;       |
| $\Sigma$ :       | indicates summation over all elements i in   | $\sum_{i}$       | signifie la sommation de tous les éléments i dans  |

#### Historical Data

Historical series on the 1981 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1981-based Industrial Product Price Indexes (IPPI) series and the corresponding 1971-based Industry Selling Price Indexes (ISPI) series, using the year 1981 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between the IPPI and ISPI series are available to the public.

#### Reference Document

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. The relationship of the new series to its Industry Selling Price predecessor is given. Comments on index use are also provided.

In the tables will be found weighting patterns for both commodities and commodity groupings. Descriptions of the characteristics of the elemental indexes are provided. A listing is provided of nearest equivalent series in the 1981 = 100 series as they relate to the 1971 = 100 Industry Selling Price Indexes, along with link factors derived from the relationship of the two series in December 1985.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

#### Données historiques

Les séries historiques sur la base 1981 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1981 et des séries correspondantes des Indices des prix de vente dans l'industrie (IPVI) basées sur 1971, l'année 1981 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les séries IPPI et IPVI sont disponibles au public.

#### Document de référence

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, \$25.00.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices. Les relations entre la nouvelle série et l'ancienne série des prix de vente dans l'industrie qui l'avait précédée s'y trouvent également. La publication contient des commentaires sur l'utilisation des indices.

Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats des produits. Y figurent également une description des caractéristiques des indices élémentaires ainsi qu'une liste des séries équivalentes les plus proches de la série 1981 = 100, dans la mesure où elles se rapportent aux Indices des prix de vente dans l'industrie 1971 = 100.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

#### RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes. 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it redistributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

#### INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de ianvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs. les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

(agg)

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| Pt/o | denotes the composite price index movement between the base period o and time t for the defined aggregate; | P <sub>t/o</sub> | dénote le mouvement de l'indice composite de priv<br>entre la période de référence o et la période courante<br>t pour l'agrégat spécifié; |
|------|--|------------------|---|
| Wi   | is the transaction value of the element i in 1981;   | Wi               | est la valeur de transaction de l'élément i en 1981;  |
| Pt/O | is the price index for element i, meaning its price change from the base period to time t;                 | Pt/o             | est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à a période courante t:             |

(agg)

 $\boldsymbol{\Sigma}_{i}$  indicates summation over all elements i in the defined aggregate.

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances, where data are not available, the price quotations are equally weighted.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

L'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

partie de l'agrégat spécifié.

# ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

#### INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis. accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril. d'apût et de décembre. Les indices ont comme période de référence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6. ou téléphonez au (613)951-9607.

### How long would it take you to get 10,000 price quotes from 3,500 companies?

Alot longer than it takes to open a copy of Industry Price Indexes. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

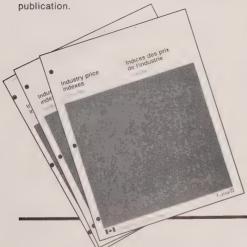

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail, **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$173 in Canada, and \$208 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this

## Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies?

eaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'Indices des prix de l'industrie. Abonnezvous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cino dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous!

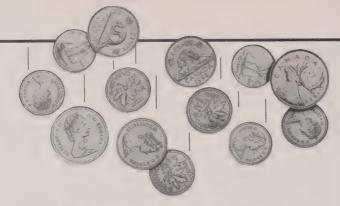

L'abonnement au mensuel Indices des prix de l'industrie (n° 62-011 au catalogue) coûte 173 \$ au Canada et 208 \$ à l'étranger.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

# What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), the **Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

• transportation
• food
• clothing
• housing

- · health and personal care
- recreation, reading and education
- tobacco products and alcoholic beverages

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of changes.

Get the facts.

Subscribe to the Consumer Price Index (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian.consumer dollar. A subscription to this monthly is available for \$89 in Canada, and \$107 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

#### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

#### NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613)951-8200.

®Registered Trade Mark of Statistics Canada.

#### Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

#### Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'avant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613)951-8200.

#### **Highlights**

#### **Industrial Product Price Index (IPPI)**

According to preliminary figures, the Industrial Product Price Index (IPPI, 1981 = 100) edged down 0.1% to 131.6 in March 1990, from February's revised level of 131.7. This decrease follows two increases registered since the start of the year. The largest increase this month was shown by the primary metal products, up 2.6% while an increase of 0.3% was shown for meat, fish and dairy products and for petroleum and coal products. These were more than offset by the impact of the decreased value of the American dollar on a number of product groups and the decline of 1.1% for printing and publishing. A majority of the decreases registered this month were the result of the 2.3% decrease, in March (following a 3.8% increase in February), of the U.S. dollar versus its Canadian counterpart and its impact on prices of exported goods and products; mainly affected were autos trucks and other transportation equipment (-1.1%) and paper and paper products (-1.4%).

Since March 1989, the IPPI has risen 0.2%. The year-to-year change was affected most by higher prices for petroleum and coal products (13.6%), machinery and equipment (2.7%), meat, fish and dairy products (1.9%) and lumber, sawmill and other wood products (2.9%). These increases were almost completely offset by lower prices for primary metal products (-15.1%) and chemical products (-5.1%). Excluding petroleum and coal products, the 12-month change was -0.8%.

After an almost steady decline since the beginning of 1989, the primary metal products index jumped 2.6% in March, mainly in response to price increases of 34.3% for nickel products, of 0.2% for copper and copper alloy products and of 5.3% for other non-ferrous metal products. With a decrease of 5.6%, the aluminum products helped moderate the overall increase. During the past 12 months, the primary metal products index has fallen 15.1%, with decreases ranging from 46.4% for nickel products to 6.7% for other non-ferrous metal products, but only 1.8% for the iron and steel products. No component registered an increase.

According to initial estimates, the petroleum and coal products price index rose 0.3% during the past month, largely as a result of higher prices for gasoline. Over 12 months, the petroleum and coal index has risen 13.6%.

The index for meat, fish and dairy products edged up 0.3% in March due to a increase of 0.8% registered by the primary meat products component. This mainly reflected higher prices, up 2.7%, for pork, fresh or frozen.

The index for printing and publishing fell 1.1% in March, due mainly to a decrease of 1.8% for commercial printing. This reflected price reductions of 7.9% for tags & labels, printed or plain and of 1.3% for business accounting records.

The machinery and equipment price index has risen 2.7% over the past 12 months, largely due to a 3.8% increase for other specialized machinery and equipment. Marked increases posted by pulp and paper industry machinery (8.8%), sawmill and woodworking machinery (6.6%) and by food preparation machinery (5.1%) were the main contributors.

#### Faits saillants

#### Indice des prix des produits industriels (IPPI)

D'après les chiffres préliminaires, l'indice des prix des produits industriels (IPPI, 1981 = 100) se situait en mars 1990 à 131.6, en baisse de 0.1% par rapport au niveau révisé de 131.7 de février 1990. Ce recul fait suite aux deux hausses affichées depuis le début de 1990. La principale hausse ce mois-ci a été affichée par les produits métalliques primaires (2.6%) alors que le groupe de la viande, du poisson et des produits laitiers, et celui des produits du pétrole et du charbon affichaient une hausse de 0.3%. Celles-ci ont plus qu'été compensées par l'impact de la baisse du dollar américain sur un certain nombre de groupes de produits et le recul de 1.1% pour l'impression et l'édition. La plupart des baisses affichées ce mois-ci sont dues principalement au déclin de 2.3% du dollar américain face au dollar canadien en mars (après une hausse de 3.8% en février) et son impact sur les prix à l'exportation; les groupes principalement affectés sont les voitures, camions et autre matériel de transport (-1.1%), et le papier et les produits connexes (-1.4%).

Depuis mars 1989, l'IPPI a augmenté de 0.2%, La variation d'une année à l'autre a été influencée surtout par les augmentations des prix des produits du pétrole et du charbon (13.6%), des machines et matériel (2.7%), des viandes, poissons et produits laitiers (1.9%) et des sciages, produits de scierie et divers (2.9%). Ces augmentations ont été partiellement compensées par la baisse des prix des produits métalliques primaires (-15.1%) et celle des produits chimiques (-5.1%). Sans les produits du pétrole et du charbon, la variation sur 12 mois se serait établie à -0.8%.

Après avoir connu une baisse presque continue depuis le début de 1989, l'indice des produits métalliques primaires a affiché une hausse de 2.6% en mars, en raison surtout des augmentations de 34.3% des produits du nickel, de 10.2% pour les produits du cuivre et des alliages de cuivre et de 5.3% pour les autres produits de métaux non ferreux. Avec une baisse de 5.6%, l'indice des produits de l'aluminium est venu modéré la tendance à la hausse. Au cours des 12 derniers mois, l'indice des produits métalliques primaires a reculé de 15.1%, les diminutions allant de 46.4% pour les produits du nickel à 6.7% pour les autres produits de métaux non ferreux et à 1.8% pour les produits du fer et de l'acier. Aucune composante n'a affiché une augmentation.

D'après les premières estimations, l'indice des prix des produits du pétrole et du charbon a augmenté de 0.3% au cours du dernier mois écoulé, suite surtout à la hausse affichée par l'essence. Au cours des 13.6% derniers mois, l'indice du pétrole et du charbon a affiché un gain de 13.6%

L'indice de la viande, du poisson et des produits laitiers a augmenté de 0.3% en mars, en raison surtout de la hausse de 0.8% affichée par la composante des produits primaires de la viande. Ceci reflétait en partie les majorations de prix de 2.7% pour le porc, frais ou congelé.

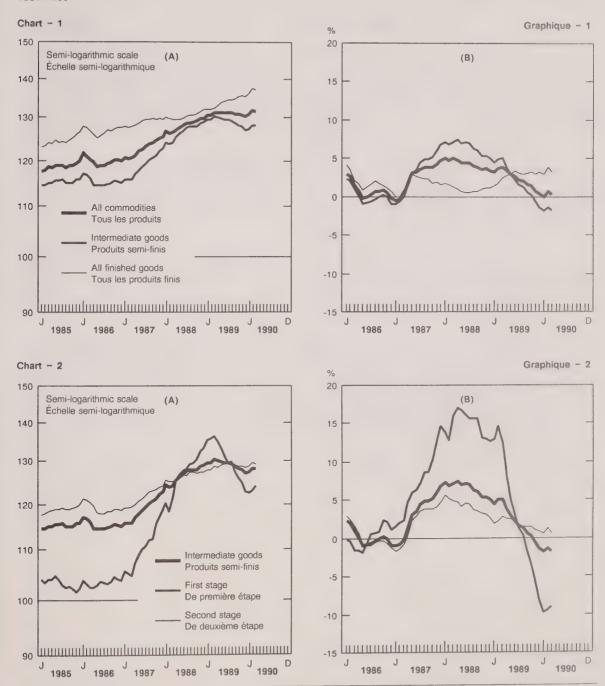

L'indice de l'impression et de l'édition a chuté de 1.1% en mars 1990, en raison de la baisse de 1.8% pour les imprimés commerciaux. Ceci reflétait les réductions de 7.9% pour les étiquettes (imprimées ou unies) et de 1.3% pour les documents pour la comptabilité.

L'indice des prix des machines et du matériel a augmenté de 2.7% au cours des 12 derniers mois, en raison surtout de l'augmentation de 3.8% pour les autres machines et matériel spécialisés. De fortes hausses montrées par les machines pour l'industrie des pfites et papier (8.8%), des scieries et machines à travailler le bois (6.6%) et par les machines à préparer les aliments (5.1%) ont mené le groupe.

# Indexes and Percentage Change<sup>1</sup> in Indexes for Industrial Product Price Indexes Indices et variation proportionnelle<sup>1</sup> en indices pour les indices des prix des produits industriels 1981 = 100

<sup>&</sup>lt;sup>1</sup> Change from same month of previous year.

<sup>1</sup> Variation depuis le même mois que l'année précédente.

# **Highlights**

#### Raw Materials Price Index

The Raw Material Price Index (RMPI, 1981 = 100) rose 1.3% between February and March 1990 to a preliminary level of 105.0. The RMPI excluding the mineral fuels component increased by 2.0%. Six out of seven components rose, while one declined. Between March 1989 and March 1990, the RMPI increased 3.7%. The RMPI excluding the mineral fuels component declined 4.2%. Three components rose and four decreased.

The non-ferrous metals index was up last month by 6.8% as prices for some base metals rose significantly: copper 13.6%, lead 27.0%, nickel 32.0% and zinc 10.2%. Precious metals were down in the month (-6.2%). The index for ferrous metals, however, was the main component index which showed a monthly decrease. Prices were down for both iron ore (-1.8%) and iron and steel scrap (-1.1%).

Both the ferrous and non-ferrous metals indexes declined over the year: ferrous (-10.7%) and non-ferrous (-18.8%). With the exception of prices for lead, prices for all metals and scraps declined, some of them quite significantly: iron and steel scrap by -17.9%, copper concentrates by -14.8%, nickel concentrates by -50.2%, and zinc concentrates by -24.7%. The price index for lead was 45.6% higher than a year ago.

The vegetable products index rose 2.1% from February as prices were up for potatoes (20.6%), cocoa, coffee and tea (10.9%), and oilseeds (1.6%). This is the third monthly rise of the index after falling through the last seven months of 1989. Lower prices for citrus and tropical fruits, down 21.2%, offset the monthly increases. Compared to March 1989, the vegetable products index declined by 6.7%, as most commodity indexes were down: grains by -14.7%, oilseeds by -15%, cocoa, coffee and tea by -18.3%. However, the index for unrefined sugar was up 25.0% and potato prices were higher by 9.8%.

The mineral fuels index rose only 0.3% from the last month, but it was up 17.8% from a year ago, due to higher prices for crude mineral oil, up 22.5%.

Higher prices for hogs in March were almost entirely responsible for both monthly (0.5%) and annual (3.7%) rises in the animal and animal products index.

## Faits saillants

## Indice des prix des matières brutes

L'indice des prix des matières brutes (IPMB, 1981 = 100) a augmenté de 1.3% entre février et mars 1990 pour atteindre le niveau préliminaire de 105.0. Si l'on exclut la composante des combustibles minéraux, l'IPMB a augmenté de 2.0%. Des sept composantes de l'IPMB, six ont progressé et une a diminué. Entre mars 1989 et mars 1990, l'IPMB s'est accru de 3.7%. Si l'on exclut la composante des combustibles minéraux, l'IPMB a baissé de 4.2 %. Trois composantes ont augmenté et quatre ont diminué.

L'indice des prix des métaux non ferreux a augmenté de 6.8% le mois dernier dû au fait que les prix de certains métaux non ferreux ont enregistré une montée importante: cuivre 13.6%, plomb 27.0%, nickel 32.0% et zinc 10.2 %. Les métaux précieux ont reculé au cours du mois (-6.2%). Toutefois, l'indice des métaux ferreux fut la seule composante principale qui a enregistré une baisse mensuelle. Le minerai de fer et les déchets de fer et d'acier ont tous les deux enregistré une baisse des prix (1.8 % et 1.1 % respectivement).

Au cours de l'année, l'indice des métaux ferreux et celui des métaux non ferreux ont tous deux diminué, respectivement de 10.7% et de 18.8%. À l'exception du prix du plomb, les prix de tous les métaux et déchets ont diminué, certains de façon assez importante: déchets de fer et d'acier 17.9%, concentrés de cuivre 14.8%, concentrés de nickel 50.2% et concentrés de zinc 24.7 %. L'indice des prix du plomb a augmenté de 45.6% par rapport à l'année précédente.

La montée de 2.1% de l'indice des substances végétales depuis février fut attribuable à la majoration des prix des pommes de terre (20.6%), du cacao, du café et du thé (10.9%) et des oléagineux (1.6%). C'est la troisième hausse mensuelle de l'indice après la baisse des sept derniers mois de 1989. Les augmentations mensuelles ont été compensées par la diminution des prix des agrumes et fruits tropicaux (-21.2%). Par rapport à mars 1989, l'indice des substances végétales a baissé de 6.7%, la plupart des indices des produits ayant enregistré une baisse: céréales 14.7%, oléagineux 15%, cacao, café et thé 18.3%. Toutefois, l'indice des prix du sucre non raffiné a enregistré une hausse de 25.0% et celui des pommes de terre de 9.8%.

L'indice des combustibles minéraux n'a augmenté que de 0.3% par rapport au mois dernier, mais il a enregistré une hausse annuelle de 17.8% en raison de la hausse de 22.5% des prix du pétrole brut.

Les augmentations mensuelle (0.5%) et annuelle (3.7%) de l'indice des prix des animaux et des substances animales furent presque entièrement attribuable à la majoration des prix du porc en mars.

Note: Indexes for the most recent six months shown are subject to revision.

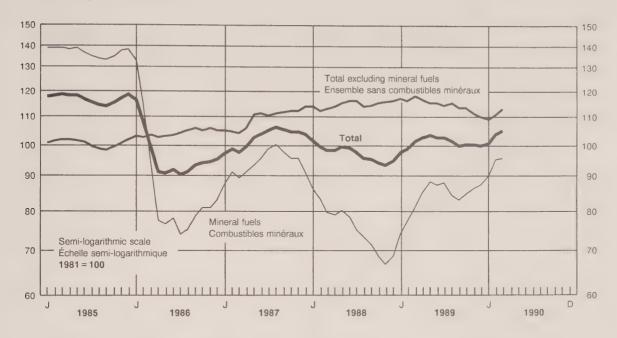

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes.

Ce chilfre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient

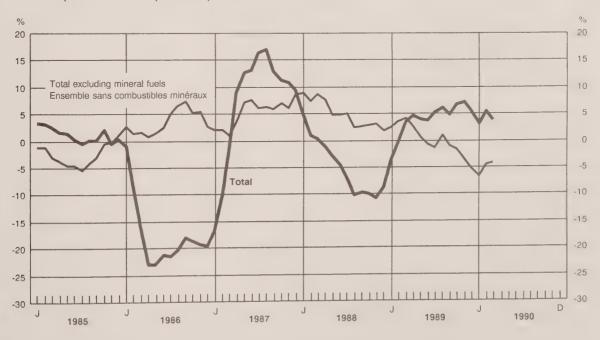

These indexes are preliminary.
Ces indices sont provisoires.

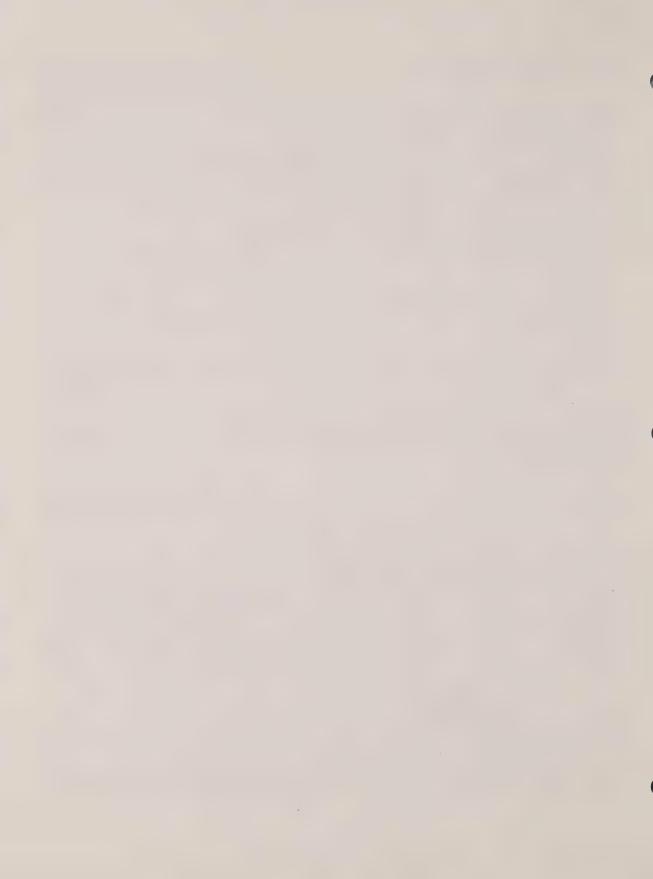

# Raw Materials Price Index Indices des prix des matières brutes

# Percentage Change in the Raw Materials Price Index Variation en pourcentage de l'indice des prix des matières brutes

From same month of previous year Variation depuis le même mois que l'année précédente

<sup>(1)</sup> (1) (2)

Revised.
Révise.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de l'arrondissement, l'indice total – tous les produits devra être considéré comme celui qui fait autorité, et l'indice total – toutes les industries manufacturières sera posé égal. (2)

Indexes for the most recent six months shown are subject to revision.

Les indices figurant pour les six mois les plus récents sont sujets à révision.

The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the M-level commodity code (from 91 c 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates either a spili of 10 the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates as a special aggregation or 99, which indicates as a special aggregation which include several PCGs). rr indicates a to PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E + S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-556).

En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnn), un numero d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme génerale ss-mm-nn-pppp-rr où sa indique le code du niveau M des produits (de 9 à 28) mm indique le code du niveau M des produits (de 9 à 28) mm indique le code GPP (saul pour certains agregats spéciaux qui comprenent plusieurs GPP) rr indiq

## TABLEAU 3. Indices des prix des produits industriels, par industries et groupes d'industries(1)

1981 = 100

Indexes for the most recent six months shown are subject to revision.
Les indices figurant pour les six mois les plus récents sont sujets à révision.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All
Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
L'agregation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de
l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera

l'arrondissement, l'indice total - tous les produits devre etre considere comme ceur qui mondissement l'indice total - tous les produits devre etre considere comme ceur qui mondissement l'indice to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité. (2) (2)

## TABLE 4. Industrial Product Price Indexes, by Stage of Processing

### TABLEAU 4. Indices des prix des produits industriels par étape de transformation

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the Input-Output tables are not yet available on the updated classification.

(1) Les indices des sorties nettes sont calculés pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

TABLE 6. Electric Power Selling Price Indexes, for Non-residential Customers

# TABLEAU 6. Indices des prix de vente de l'énergie électrique, pour les acheteurs non-résidentiels

Monthly prices are collected and processed three times per annum.

Des prix mensuels sont relevés et calculés trois fois par année.

Indexes for the current year and previous year are subject to revision.

Les indices pour l'année courante et pour l'année précèdente sont sujets à révision.

### TABLEAU 7. Indices des prix des matières brutes

1981 = 100

# EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

## Industrial Product Price Indexes, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

#### **Price Surveys**

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

# EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRE DES PRIX INDUSTRIELS

## Indice des prix des produits industriels, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

### Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabilistes, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

## Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

#### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w<sup>i</sup> are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix. bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

### Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

#### Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w' sont les valeurs de la production de chaque produit:

$$P_{t,o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{i} w^{i}} \cdot P_{t,o}^{i}$$

| (agg) |            |        |           |        |        |    |      |
|-------|------------|--------|-----------|--------|--------|----|------|
| Pt/o  | denotes    | the    | compo:    | site   | price  | ir | ndex |
|       | movemen    | t betw | een the   | base   | period | 0  | and  |
|       | time t for | the de | fined agg | gregat | e;     |    |      |

$$P_{t/0}^{l}$$
 is the price index for element i, meaning its price change from the base period to time t;

$$\Sigma_{i}$$
 indicates summation over all elements i in the defined aggregate.

$$\sum_i$$
 signifie la sommation de tous les éléments i dans l'agrégat défini.

#### **Historical Data**

Historical series on the 1981 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1981-based Industrial Product Price Indexes (IPPI) series and the corresponding 1971-based Industry Selling Price Indexes (ISPI) series, using the year 1981 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between the IPPI and ISPI series are available to the public.

#### Reference Document

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. The relationship of the new series to its Industry Selling Price predecessor is given. Comments on index use are also provided.

In the tables will be found weighting patterns for both commodities and commodity groupings. Descriptions of the characteristics of the elemental indexes are provided. A listing is provided of nearest equivalent series in the 1981 = 100 series as they relate to the 1971 = 100 Industry Selling Price Indexes, along with link factors derived from the relationship of the two series in December 1985.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

### Données historiques

Les séries historiques sur la base 1981 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1981 et des séries correspondantes des Indices des prix de vente dans l'industrie (IPVI) basées sur 1971, l'année 1981 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les séries IPPI et IPVI sont disponibles au public.

#### Document de référence

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, \$25.00.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices. Les relations entre la nouvelle série et l'ancienne série des prix de vente dans l'industrie qui l'avait précédée s'y trouvent également. La publication contient des commentaires sur l'utilisation des indices.

Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats des produits. Y figurent également une description des caractéristiques des indices élémentaires ainsi qu'une liste des séries équivalentes les plus proches de la série 1981 = 100, dans la mesure où elles se rapportent aux Indices des prix de vente dans l'industrie 1971 = 100.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

## RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes, 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it redistributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

## INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM.

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de janvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/0}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/0}^{i}$$

| (agg)<br>Pt/o | denotes the composite price index movement between the base period o and time t for the defined aggregate; | (agg)<br>P <sub>t/o</sub> | dénote le mouvement de l'indice composite de prix<br>entre la période de référence o et la période courante<br>t pour l'agrégat spécifié; |
|---------------|--|---------------------------|---|
| wi            | is the transaction value of the element i in 1981;   | wi                        | est la valeur de transaction de l'élément i en 1981;  |
| Pt/O          | is the price index for element i, meaning its price change from the base period to time t;                 | Pt/O                      | est l'indice de prix de l'élément i, c'est-à-dire son<br>changement de prix de la période de référence o à a<br>période courante t;       |
| $\sum_{i}$    | indicates summation over all elements i in the defined aggregate.  | $\Sigma_{i}$              | indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.  |
|               |  |                           |   |

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances, where data are not available, the price quotations are equally weighted.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

L'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

## RAW MATERIALS PRICE INDEX, 1981 = 100, WEIGHTING DIAGRAM

# ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

## INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue. conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de reférence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la presente année et de l'année précédente sont sujets à révision.

**BON DE COMMANDE** 

### Over three million Plus de trois **Canadian adults** have a disability...

he Health and Activity Limitation Survey (HALS) interviewed over 120,000 disabled Canadians residing in households and institutions. The result is a unique and detailed database on the barriers faced by more than 1 in 10 Canadians during the conduct of their daily activities.

Whether you plan and develop policies and programs for persons with disabilities, employ disabled people, or design accommodation facilities or transportation services, HALS can provide you with the information you need to make better decisions.

A comprehensive profile of the disabled population is available for each province and territory. Special studies are also underway and cover issues such as:

- characteristics of disabled persons who are not in the labour force
- special needs of seniors with disabilities
- socio-economic conditions specific to women with

# millions d'adultes canadiens ont une incapacité

our l'Enquête sur la santé et les limitations d'activités, on a interviewé plus de 120 000 Canadiens atteints d'incapacité qui faisaient partie d'un ménage ou habitaient en institution. On a ainsi obtenu une base de données unique et détaillée sur les barrières que doit surmonter plus d'un Canadien sur dix dans ses activités quotidiennes.

Vous employez des personnes ayant une incapacité? Vous planifiez ou élaborez des politiques et des programmes à leur intention? Ou vous concevez des installations ou des services de transport? Alors, les résultats de l'Enquête peuvent vous aider à prendre des décisions éclairées.

Vous pouvez vous procurer un profil détaillé de la population ayant une incapacité pour chaque province et territoire. Des études spéciales sont également en cours et portent sur :

- les caractéristiques des personnes inactives ayant une
- les besoins particuliers des personnes âgées ayant une incapacité
- les conditions socio-économiques particulières aux femmes ayant une incapacité

Pour en savoir davantage sur les publications, le service de demandes spéciales et les fichiers de microdonnées de l'Enquête, téléphonez au Centre régional de consultation de Statistique Canada le plus près. Vous en trouverez la liste dans cette publication.

### Do you really have time to monitor over 200 Trusteed Pension Funds?

Y ou do – if you subscribe to Quarterly Estimates of Trusteed Pension Funds.

The only periodical of its kind in Canada, Quarterly Estimates surveys the 200 largest trusteed pension funds, which hold 85% of the assets of all trusteed funds. The result is detailed, aggregate estimates of the income, expenditure and assets of approximately 3,800 funds operating in Canada.

Each issue gives you:

- current financial data for employee and employer contributions to the fund;
- investment income, profits and losses on sales of securities:
- · pension payments and annuity purchases.

Distribution of investment portfolios among such vehicles as stocks, bonds, pooled funds and short term holdings is also highlighted. The accompanying analysis examines trends, growth and performance over time.

Get the numbers.

Subscribe to Quarterly Estimates of Trusteed Pension Funds, (Catalogue No. 74-001) for the regular update you need. A subscription to this quarterly is \$44 annually in Canada, US\$53 in the United States and US\$62 in other countries

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

# Vous avez le temps de vous renseigner sur plus de 200 caisses de retraite en fiducie?

O ui – si vous vous abonnez à Estimations trimestrielles relatives aux caisses de retraite en fiducie.

Ce périodique, unique en son genre au Canada, passe en revue la situation des 200 plus importantes caisses de retraite en fiducie, qui représentent 85 % de l'actif de l'ensemble des caisses de retraite. Le résultat prend la forme d'estimations détaillées et globales des recettes, des dépenses et de l'actif d'environ 3 800 caisses de retraite au Canada.

Chaque numéro vous présente

- des données financières courantes relativement aux cotisations de l'employé et de l'employeur à la caisse de retraite.
- les revenus de placements ainsi que les profits et pertes sur les ventes de titres;
- les paiements des pensions et les achats de rentes.

Vous y trouverez également des renseignements sur la répartition des portefeuilles de placement entre les actions, les obligations, les fonds communs et les placements à court terme ainsi qu'une analyse des tendances, de la croissance et du rendement dans le temps.

Abonnez-vous!

La publication Estimations trimestrielles relatives aux caisses de retraite en fiducie (n° 74-001 au catalogue) vous permet d'obtenir régulièrement les données à jour dont vous avez besoin. L'abonnement à cette publication trimestrielle coûte 44 \$ par année au Canada, 53 \$ US aux États-Unis et 62 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1 A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

#### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### **How to Obtain More Information**

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section, Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9607) or to the Statistics Canada reference centre in:

#### Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

#### Comment obtenir d'autres renseignements

#### **Highlights**

#### Industrial Product Price Index (IPPI)

According to preliminary figures, the Industrial Product Price Index (IPPI, 1981 = 100) edged down 0.1% to 131.4 in April 1990, from March's revised level of 131.5. This decrease follows two increases registered at the start of the year. The largest increase this month was shown by the meat, fish and dairy products (0.5%) which was followed by a 0.3% increase for beverages. These were more than offset by the impact of the decreased value of the American dollar on a number of product groups and the estimated decline of 0.4% for petroleum and coal products. A majority of the decreases registered this month were the result of the 1.2% decrease, in April, of the U.S. dollar versus its Canadian counterpart and its impact on prices of exported goods and products; mainly affected were autos, trucks and other transportation equipment (-0.6%) and paper and paper products (-0.8%).

Since April 1989, the IPPI has risen 0.1%. The year-to-year change was affected most by higher prices for petroleum and coal products (11.4%), machinery and equipment (2.4%), meat, fish and dairy products (2.1%) and lumber, sawmill and other wood products (3.0%). These increases were almost completely offset by lower prices for primary metal products (-13.1%), chemical products (-4.6%) and paper and paper products (-1.9%). Excluding petroleum and coal products, the 12-month change was -0.9%.

The index for meat, fish and dairy products rose 0.5% in April due mainly to increases of 0.7% for meat products and 1.0% for fish products. This mainly reflected higher prices for fresh or frozen, pork (1.0%), beef and veal (0.8%) as well as for fish fillets, steaks, groundfish (3.1%).

The index for beverages has shown an increase of 0.3% in April mainly due to a rise of 0.5% for alcoholic beverages. This reflected mainly the jump of 4.6% registered for whiskey for export. During the last 12 months, the beverages index has risen 3.3%.

According to initial estimates, the petroleum and coal products price index fell 0.4% during the past month, largely as a result of lower prices for fuel oils and other fuel. Over 12 months, the petroleum and coal products index has risen 11.4%.

With an increase of 3.7% in April, the index for aluminum products was the only group to show an increase as the primary metal products index edged down 0.1%. During the past 12 months, the primary metal products index has fallen 13.1%, with decreases ranging from 40.1% for nickel products to 3.6% for other non-ferrous metal products, but only 2.4% for the iron and steel products. No component registered an increase.

The machinery and equipment price index has risen 2.4% over the past 12 months, largely due to a 3.4% increase for other specialized machinery and equipment. Marked increases posted by pulp and paper industry machinery (7.0%), sawmill and woodworking machinery (6.9%) and by food preparation machinery (4.2%) were the main contributors. Only the office machines and equipment group showed a decrease over the last 12 months (-1.8%).

#### Faits saillants

#### Indice des prix des produits industriels (IPPI)

D'après les chiffres préliminaires, l'indice des prix des produits industriels (IPPI, 1981 = 100) se situait en avril 1990 à 131.4, en baisse de 0.1% par rapport au niveau révisé de 131.5 de mars 1990. Ce recul fait suite aux deux hausses affichées au début de 1990. La principale hausse ce mois-ci a été affichée par le groupe de la viande, du poisson et des produits laitiers (0.5%), suivi par les boissons (0.3%). Celles-ci ont plus qu'été compensées par l'impact de la baisse du dollar américain sur un certain nombre de groupes de produits et la baisse estimée de 0.4% pour les produits du pétrole et du charbon. La plupart des baisses affichées ce mois-ci sont dues principalement au déclin de 1.2% du dollar américain face au dollar canadien en avril et son impact sur les prix à l'exportation; les groupes principalement affectés sont les voitures, camions et autre matériel de transport (-0.6%) et le papier et les produits connexes (-0.8%).

Depuis avril 1989, l'IPPI a augmenté de 0.1%, La variation d'une année à l'autre a été influencée surtout par les augmentations des prix des produits du pétrole et du charbon (11.4%), des machines et matériel (2.4%), des viandes, poissons et produits laitiers (2.1%) et des sciages, produits de scierie et divers (3.0%). Ces augmentations ont été presque complètement compensées par la baisse des prix des produits métalliques primaires (-13.1%), des produits chimiques (-4.6%) et du papier et produits connexes (-1.9%). Sans les produits du pétrole et du charbon, la variation sur 12 mois s'est établie à -0.9%.

L'indice de la viande, du poisson et des produits laitiers a augmenté de 0.5% en avril, en raison surtout des hausses affichées de 0.7% par la composante des produits de la viande et de 1.0% par celle des poissons. Ceci reflétait en partie les majorations de prix pour les variétés fraiches ou congelées, du porc (1.0%), du boeuf et du veau (0.8%) ainsi que pour les filets, tranches et blocs de poisson de fond (3.1%).

L'indice des boissons a connu une hausse de 0.3% en avril en raison surtout de la montée de 0.5% affichée par les boissons alcooliques. Ceci reflétait le saut de 4.6% enregistré par le whiskey destiné à l'exportation. Au cours des 12 derniers mois, l'indice des boissons est en hausse de 3.3%.

D'après les premières estimations, l'indice des prix des produits du pétrole et du charbon a chuté de 0.4% au cours du dernier mois écoulé, suite surtout à la baisse affichée par les mazouts et autres carburants. Au cours des 12 derniers mois, l'indice du pétrole et du charbon a affiché un gain de 11.4%.

Avec une hausse de 3.7% en avril, l'indice des produits de l'aluminium a été le seul a affiché une hausse, alors que l'indice des produits métalliques primaires fléchissait de 0.1%. Au cours des 12 derniers mois, l'indice des produits métalliques primaires a reculé de 13.1%, les diminutions allant de 40.1% pour les produits du nickel à 3.6% pour les autres produits de métaux non ferreux et à 2.4% pour les produits du fer et de l'acier. Aucune composante n'a affiché une augmentation.

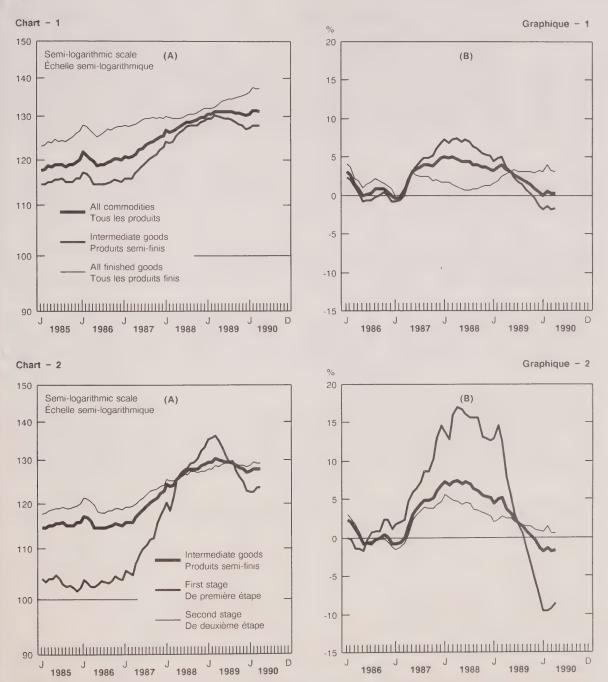

L'indice des prix des machines et du matériel a augmenté de 2.4% au cours des 12 derniers mois, en raison surtout de l'augmentation de 3.4% pour les autres machines et matériel spécialisés. De fortes hausses montrées par les machines pour l'industrie des pâtes et papier (7.0%), des scieries et machines à travailler le bois (6.9%) et par les machines à préparer les aliments (4.2%) ont mené le groupe. Seul le groupe des machines et matériel de bureau a affiché une baisse au cours des 12 derniers mois (-1.8%).

#### **Highlights**

#### Raw Materials Price Index

The Raw Materials Price Index (RMPI, 1981 = 100) declined 3.3% between March and April 1990 to a preliminary level of 101.6. The RMPI excluding the mineral fuels component declined by 0.2%. Of seven components of the RMPI, three fell in April, three rose and one did not change. Between April 1989 and April 1990, the RMPI decreased 0.8%. The RMPI excluding the mineral fuels component declined 3.3% and outweighed an increase in the mineral fuels index.

The mineral fuels index was down 7.6% from March, mainly as a result of an estimated 8.6% decrease in crude mineral oil prices and a 4.9% drop in prices for natural gas. The index was up 3.8% from April 1989, due largely to higher prices for crude mineral oil, up 4.6%.

The Vegetable products index did not change in April, but it declined 6.3% over the last twelve months, due to lower prices for grains (-13.0%), oilseeds (-13.2%), and citrus and tropical fruits (-13.8%). A partially offsetting effect came from higher prices for fresh vegetables (7.0%) and unrefined sugar (22.2%).

Over the month, the animal and animal products index was up 0.2%, mainly as a result of higher prices for cattle for slaughter (0.9%), and hogs (0.6%). Over the year, increases in the prices for hogs (34.7%), cattle for slaughter (2.2%), fish (6.7%) and shellfish (13.6%) were largely responsible for the animal and animal products index to have risen by 5.3%.

The non-ferrous metals index was down by 2.2% from the last month. Lower prices for concentrates of copper (-5.5%) and lead (-10.5%), and precious metals (-6.5%) were partially offset by higher prices for concentrates of zinc (10.8%) and some non-ferrous scraps. From a year ago, the non-ferrous metals index declined by 18.0% as prices for almost all metals fell; the majority of them by a double-digit percentage. Only prices for lead concentrates rose (31.4%).

The ferrous materials index was also down (-10.9%) as both of its components decreased: iron ore by 6.4% and iron and steel scrap by 17.8%.

#### Faits saillants

#### Indice des prix des matières brutes

L'indice des prix des matières brutes (IPMB, 1981 = 100) a baissé de 3.3% entre mars et avril 1990 pour se fixer au niveau préliminaire de 101.6. Sans la composante des combustibles minéraux, l'IPMB a baissé de 0.2%. Des sept composantes de l'indice, trois ont diminué en avril, deux ont augmenté et une est demeurée au même niveau. Entre avril 1989 et avril 1990, l'IPMB a baissé de 0.8%. Sans la composante des combustibles minéraux, l'IPMB a enregistré une diminution de 3.3%, ce qui a plus que compensé la hausse de l'indice des combustibles minéraux.

L'indice des combustibles minéraux a diminué de 7.6% par rapport à mars, principalement à cause d'une baisse estimative de 8.6% du prix du pétrole brut et d'un recul de 4.9% du prix du gaz naturel. L'indice des combustibles minéraux a affiché une hausse de 3.8% depuis le mois d'avril 1989, en raison principalement des prix plus élevés pour le pétrole brut, en hausse de 4.6%.

L'indice des substances végétales est resté inchangé en avril, mais s'est replié de 6.3% au cours des douze derniers mois, en raison de la baisse du prix des céréales (-13,0%), des oléagineux (-13,2%) ainsi que des agrumes et des fruits tropicaux (-13.8%). La majoration des prix des légumes frais (7.0%) et du sucre non raffiné (22.2%) ont en partie compensé cette diminution.

Au cours du mois, l'indice des animaux et des substances animales a augmenté de 0.2%, principalement à cause de la hausse des prix des bovins d'abattage (0.9%) et des porcs (0.6%). Au cours de la dernière année écoulée, la hausse des prix des porcs (34.7%), des bovins d'abattage (2.2%), du poisson (6.7%) et des crustacés (13.6%) a été la raison principale de l'augmentation de 5.3% de l'indice des animaux et des substances animales.

L'indice des métaux non ferreux a baissé de 2.2% par rapport au mois précédent. La diminution des prix des concentrés de cuivre (-5.5%) et de plomb (-10.5%) ainsi que des métaux précieux (-6.5%) a été en partie neutralisée par la hausse de ceux des concentrés de zinc (10.8%) et de certains déchets non ferreux. Par rapport à un an plus tôt, l'indice des métaux non ferreux s'est replié de 18.0% en raison d'une baisse des prix de presque tous les métaux, le plus souvent par plus de 10%. Seul les prix des concentrés de plomb ont été à la hausse (31.4%).

L'indice des matières ferreuses a également été à la baisse (-10.9%), en raison de la diminution de ses deux composantes, le minerai de fer (-6.4%) et les déchets de fer et d'acier (-17.8%).

Indexes for the most recent six months shown are subject to revision.

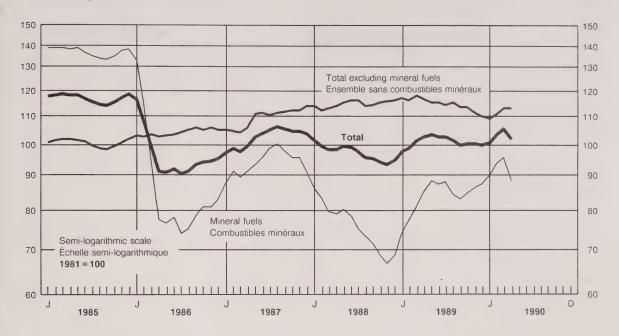

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes. Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient inchangés.

These indexes are preliminary.

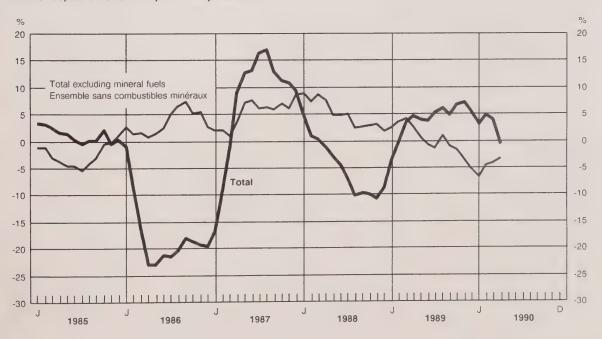

Ces indices sont provisoires.

### Raw Materials Price Index Indices des prix des matières brutes

#### Percentage Change in the Raw Materials Price Index Variation en pourcentage de l'indice des prix des matières brutes

From same month of previous year Variation depuis le même mois que l'année précédente

<sup>(1)</sup> 

Revised.
Révise.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total – tous les produits devra être considéré comme celui qui fait autorité, et l'indice total – toutes les industries manufacturières sera posé égal. (2)

TABLE 2. Industrial Product Price Indexes, by Commodity and Commodity Aggregations
TABLEAU 2. Indices des prix des produits industriels, par produits et agrégations des produits
